Covid-19..??

Coronavirus disease COVID-19 is a viral infection caused by the COVID-19 virus. It was first detected in Wuhan (China) on 31st December 2019 and named the coronavirus disease on 8th January 2020. It is caused by the SARS-CoV-2 virus and is characterized by respiratory symptoms and spread through respiratory droplets. The World Health Organization (WHO) declared COVID-19 a pandemic on 11th March 2020. The Indian Council of Medical Research (ICMR) has recommended that people monitor their health and contact the local health authorities if they develop symptoms.

Symptoms of COVID-19 can range from mild to severe and can include fever, cough, sore throat, fatigue, headache, muscle pain, shortness of breath, and dry cough. The Centers for Disease Control and Prevention (CDC) advise that people should look after themselves at home if they have these symptoms or if they test positive for COVID-19. If the symptoms worsen or persist for more than seven days, they should seek medical attention.

If you have had close contact with someone who has COVID-19 or if you have symptoms of COVID-19, the Indian Government advises that you should self-isolate for 14 days and contact the local health authorities for advice on when to quarantine. If you have tested positive, or if you suspect that you have COVID-19, the government advises that you should remain at home and follow the guidelines issued by the health authorities.

The Indian Ministry of Health and Family Welfare (MoHFW) has issued several guidelines to prevent the spread of COVID-19. These include wearing masks, practicing social distancing, washing hands regularly, and avoiding crowded places. It is also advised that people should avoid non-essential travel and should maintain physical and social distancing as much as possible.

In addition to the above precautions, here are some practices that can help you cope with COVID-19:

- Stay hydrated: Drink plenty of fluids to keep your system in working order
- Get adequate rest: Try to get at least 7-8 hours of sleep to help your body fight off the virus
- Eat a balanced diet: A balanced diet can help boost your immune system and fight off the virus
- Exercise regularly: Regular physical activity can help improve your overall health and disinfect your hands if you're out running errands
- Practice stress-reducing activities: Activities such as meditation, yoga, or deep breathing can help relieve stress and anxiety, which can in turn help the body fight off the virus
